## Question Bank

NOTE: Any questions where you get a decimal or fraction as an answer can be rounded to 2 decimal places or left as an exact value.

1. For each of the following equations, fill out the corresponding table of values, plot the points on a Cartesian plane, and draw a graph of the curve. Does the graph converge on a value as  $x \rightarrow \infty$  or  $x \rightarrow -\infty$ ?

a)  $y = 2^x$

|     |    |    |    |   |   |   |   |
|-----|----|----|----|---|---|---|---|
| $x$ | -3 | -2 | -1 | 0 | 1 | 2 | 3 |
| $y$ |    |    |    |   |   |   |   |

b)  $y = 2^{-x}$

|     |    |    |    |   |   |   |   |
|-----|----|----|----|---|---|---|---|
| $x$ | -3 | -2 | -1 | 0 | 1 | 2 | 3 |
| $y$ |    |    |    |   |   |   |   |

c)  $y = 2^{x-1}$

|     |    |    |    |   |   |   |   |
|-----|----|----|----|---|---|---|---|
| $x$ | -3 | -2 | -1 | 0 | 1 | 2 | 3 |
| $y$ |    |    |    |   |   |   |   |

d)  $y = 2^{\frac{x}{2}}$

|     |    |    |    |   |   |   |   |
|-----|----|----|----|---|---|---|---|
| $x$ | -6 | -4 | -2 | 0 | 2 | 4 | 6 |
| $y$ |    |    |    |   |   |   |   |

2. For each of the following equations create a table of values and use them to graph the curves on a Cartesian plane.

a)  $y = \left(\frac{1}{2}\right)^x$

c)  $y = 2^{x+4}$

b)  $y = -3^x$

d)  $y = 3^x - 3$

3. The graphs from question 1. b) and 2. a) should look the same. Based on their equations,  $y = 2^{-x}$  and  $y = \left(\frac{1}{2}\right)^x$  why do you think this could be the case?

4. For each of the following equations, plot a graph using a method you feel comfortable with. On the same plane plot the line of the horizontal asymptote (the value the curve converges upon) and state its equation.

a)  $y = 2^x - 2$

c)  $y = 3(3^{x-2} - 1)$

b)  $y = -2^x + 2$

d)  $y = \frac{2^{-x+2} + 6}{3}$

## Answers

1. a)

|     |               |               |               |   |   |   |   |
|-----|---------------|---------------|---------------|---|---|---|---|
| $x$ | -3            | -2            | -1            | 0 | 1 | 2 | 3 |
| $y$ | $\frac{1}{8}$ | $\frac{1}{4}$ | $\frac{1}{2}$ | 1 | 2 | 4 | 8 |

As  $x \rightarrow -\infty$  the curve converges toward 0.

b)

|     |    |    |    |   |               |               |               |
|-----|----|----|----|---|---------------|---------------|---------------|
| $x$ | -3 | -2 | -1 | 0 | 1             | 2             | 3             |
| $y$ | 8  | 4  | 2  | 1 | $\frac{1}{2}$ | $\frac{1}{4}$ | $\frac{1}{8}$ |

As  $x \rightarrow \infty$  the curve converges toward 0.

c)

|     |                |               |               |               |   |   |   |
|-----|----------------|---------------|---------------|---------------|---|---|---|
| $x$ | -3             | -2            | -1            | 0             | 1 | 2 | 3 |
| $y$ | $\frac{1}{16}$ | $\frac{1}{8}$ | $\frac{1}{4}$ | $\frac{1}{2}$ | 1 | 2 | 4 |

As  $x \rightarrow -\infty$  the curve converges toward 0.

d)

|     |               |               |               |   |   |   |   |
|-----|---------------|---------------|---------------|---|---|---|---|
| $x$ | -6            | -4            | -2            | 0 | 2 | 4 | 6 |
| $y$ | $\frac{1}{8}$ | $\frac{1}{4}$ | $\frac{1}{2}$ | 1 | 2 | 4 | 8 |

As  $x \rightarrow -\infty$  the curve converges toward 0.

2. a)  $y = \left(\frac{1}{2}\right)^x$

b)  $y = -3^x$

c)  $y = 2^{x+4}$

d)  $y = 3^x - 3$

3. You can use index laws to show that

$$\begin{aligned} y &= \left(\frac{1}{2}\right)^x, \\ &= \frac{1^x}{2^x}, \\ &= \frac{1}{2^x}, \\ &= 2^{-x}. \end{aligned}$$

4. a)  $y = 2^x - 2$  has an asymptote at  $y = -2$

b)  $y = -2^x + 2$

c)  $y = 3(3^{x-2} - 1)$

d)  $y = \frac{2^{-x+2} + 6}{3}$
